

Next Level Energy Solutions On A Broad Scale

Energy Independence. More Choice. Less Waste.

Control, Reduce, Sustain, No Matter Your Size

For two decades, Energy Professionals has helped businesses, corporations and municipalities find the best energy solutions for their needs.

Introduction

With smart cities on the rise, targeted sustainability goals and demand for reducing emissions, municipalities are looking for reliable energy solutions to optimize usage; providing all essential government services, in the most efficient manner possible, to which no small benefits includes major reductions in energy costs.

Different to a residence or a business, municipalities face a variation of challenges when it comes to energy management. Due to a large and diverse footprint, unusual load profiles, a lack of uniformity in terms of process and strategy and many other reasons, municipalities critically require tailored solutions.

Aiding navigation through a complex field, Energy Professionals provides municipalities with both short and long term energy solutions catering to diversified needs. From Utility bill auditing, lighting retrofits, power factor correction and energy procurement for gas and electric, Energy Professionals have brought value to many municipalities and county operated facilities. While each of these entities have their own unique usage and profile on how they use energy, the solutions provided and cost savings differ.

"Management now has control and greater insight into energy usage and costs, with a reduction in energy bills by 25% compared to previous years. Demand Response program participation has led to new revenue streams with ROI anticipated in 6-12 months, compared to an industry average of 5 years." - N.S. Inc.
